# WHY DO YOU NEED A MUZZLE DEVICE?

## HOW TO CHOOSE WHAT'S BEST

CHOOSING A DEVICE CAN BE DAUNTING, BUT BY RECOGNIZING YOUR SPECIFIC PLATFORM AND APPLICATION, YOU CAN NARROW IT DOWN TO WHAT FITS YOU BEST. WE'RE HERE TO HELP YOU OUT.

WITH THREADED BARRELS BECOMING STANDARD, THE PERFORMANCE THAT COMES WITH A MUZZLE DEVICE IS NOW MORE PRACTICAL THAN EVER.

### WHAT IS RECOIL?

RECOIL IS THE FORCE CREATED AS AN EQUAL AND OPPOSITE REACTION TO THE FORCE AND EXHAUST OF A CARTRIDGE BEING FIRED. THIS EXHAUST INCLUDES UNBURNT POWDER, WHICH IS WHAT CREATES MUZZLE FLASH.

### WHY IS IT BAD?

MUZZLE FLASH CAN CAUSE VISUAL DISCOMFORT AND FLINCHING, EVEN MORE SO IN LOW OR NO LIGHT.

RECOIL IS OFTEN THE MOST COMMON CAUSE OF FLINCH, MUZZLE RISE, AND SHOOTING FATIGUE.

UP TO 84% RECOIL REDUCTION

## WHAT DEVICES ARE AVAILABLE?

MUZZLE BRAKES / COMPENSATORS TYPICALLY FALL INTO 3 CATEGORIES, OR HYBRIDS OF MULTIPLE.

FLASH HIDERS DIFFUSE COMBUSTING POWDER THAT BURNS AT THE MUZZLE, THUS REDUCING VISIBLE FLASH SIGNATURE.

SIDE VENTING BRAKES HAVE 90 DEGREE BAFFLES WHICH PROVIDE HIGH RECOIL REDUCTION AND ONLY DIVERT GASES PERPENDICULAR TO THE MUZZLE.

COMPENSATORS FOCUS ON DIVERTING GASES UPWARD TO REDUCE MUZZLE RISE WHILE FIRING

REAR VENTING BRAKES DIVERT GASES AT AN ANGLE TOWARDS THE SHOOTER. THIS BAFFLE STYLE IS THE MOST EFFECTIVE AT REDUCING THE EFFECTS OF RECOIL.

## INSIDE SPREAD

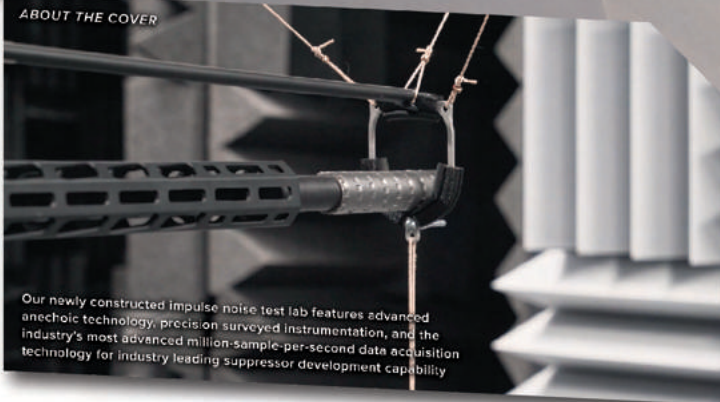

### WHAT IS TRICENTRIC™

Our Tricentric™ Interface was developed out of a frustration with unreliable, unnecessarily complex, and potentially dangerous modular suppressor systems. We set out to combine the strength and performance of a sealed suppressor, with the versatility and serviceability of a modular suppressor.

The result is an advanced polygonal thread technology featuring multiple tapered "lobes" that force a perfectly concentric alignment and securely lock together when fully engaged, creating a modular assembly with the precision and strength of a single unitized body.

By innovating the way each baffle connects, we can bridge the gap between the performance of a sealed suppressor and the versatility of a modular one. This technology, which is being implemented across all of our modular suppressors, is just the beginning.

ABOUT THE COVER

Our newly constructed impulse noise test lab features advanced anechoic technology, precision surveyed instrumentation, and the industry's most advanced million-sample-per-second data acquisition technology for industry leading suppressor development capability.
